

On October 16, 2009, the 8th grade class took the EXPLORE test. This test is associated with the ACT. The Explore test helps students to identify their strong and weak academic areas. In addition, Calvary Christian School's 8th grade EXPLORE results are compared to students across the nation. The chart, sent to us by ACT (makers of the EXPLORE), shows how CCS compared to the nation. As you can see, we did exceptionally well! We scored 2 or more points higher in each subject area than the rest of the students across the nation! Good Job 8th grade and Good Job to our CCS teachers who are preparing our students academically and for life after high school!

**CHART 1: How does our students' performance compare with that of students in the national norm group?**

These charts show how the average score performance of our students compares with that of students nationwide.
